PROFESSIONAL SUMMARY

Cybersecurity Analyst and Systems Technician with 2+ years of experience in autonomous systems testing, real-time monitoring, and infrastructure troubleshooting. Proven ability to maintain 99.9% uptime in mission-critical environments. Pursuing a B.S. in Information Systems and Cybersecurity (4.0 GPA). Skilled in Linux, SIEM monitoring, vulnerability assessment, and network security protocols. Strong communicator with a background in safety-critical operations and technical documentation.

TECHNICAL SKILLS

Operating Systems and Admin	Linux CLI, File Permissions, Process Management, System Administration, SOC Monitoring, System Hardening
Security and Networking	Vulnerability Scanning, IDS/IPS, Network Traffic Analysis, IAM, Privilege Escalation, NIST, ISO, CIS Controls, Firewalls (Palo Alto, Cisco ASA)
Tools and Frameworks	Splunk, Google Chronicle, Nmap, Nikto, Burp Suite, LinPEAS, DVWA, Wireshark, MITRE ATT&CK, Nessus, Active Directory
Database and Programming	SQL Querying, Database Security Testing, Python (Beginner), Technical Documentation
Hardware and Systems	Diagnostics, Troubleshooting, Performance Monitoring

PROFESSIONAL EXPERIENCE

Autonomous Systems Operator

Kodiak Robotics | Dallas, TX | Jan 2026 – Present

- Monitored and tested autonomous driving software across 500+ real-world driving scenarios per month, sustaining 99.9% system uptime
- Identified and escalated 30+ system anomalies per quarter alongside engineering teams, reducing mean time to resolution by ~20%
- Performed diagnostic troubleshooting on hardware/software integration systems, resolving incidents 25% faster than team baseline
- Conducted 100+ simulations and stress tests under adverse and edge-case conditions to validate system resilience
- Documented bugs, system faults, and improvement recommendations across 50+ structured technical reports
- Trained 6 new operators on system protocols, safety procedures, and troubleshooting workflows, reducing onboarding time by 30%

Hazmat Logistics Specialist

Pilot Flying J | Dallas, TX | Mar 2023 – Jan 2026

- Maintained 100% DOT and federal regulatory compliance across 1,000+ hazardous material hauls with zero violations over 3 years
- Performed structured inspections on 500+ vehicle/load combinations using standardized checklists and digital reporting tools
- Achieved zero-incident safety record through proactive hazard identification and risk mitigation across 35 consecutive months
- Coordinated dispatch for 20+ drivers, optimizing scheduling to ensure on-time delivery and sustained regulatory compliance

Autonomous Systems Technician

Waymo (Transdev) | Dallas, TX | Apr 2021 – Jan 2023

- Monitored and tested autonomous driving software across 400+ real-world operational environments
- Identified 25+ system vulnerabilities and performance anomalies per cycle, escalating critical findings to engineering teams
- Performed diagnostic troubleshooting on hardware/software integration systems, reducing overall downtime by 15%
- Conducted 80+ simulations and stress tests under adverse conditions to surface software defects before deployment

- Authored 40+ structured technical reports documenting bugs, root causes, and recommended improvements
- Trained 4 new technicians on protocols and troubleshooting workflows, cutting ramp-up time by approximately 2 weeks

TECHNICAL LABS AND PROJECTS

TryHackMe – Linux Security Labs

- Completed 20+ guided Linux security challenges covering file permissions, process management, and privilege escalation
- Simulated real-world attack/defense scenarios and applied findings to SOC monitoring and intrusion detection techniques

HackTheBox – Ethical Hacking Practice

- Exploited 10+ intentionally vulnerable machines using enumeration, privilege escalation, and lateral movement techniques
- Applied MITRE ATT&CK; framework to map attack paths and develop corresponding mitigation strategies

DVWA – Web Application Security Testing

- Executed SQL injection, authentication bypass, and XSS attacks in a controlled lab environment
- Documented each vulnerability with proof-of-concept exploits and step-by-step remediation recommendations

Network Vulnerability Assessment – Nmap / Nikto / Burp Suite

- Conducted active network scans to identify open ports, running services, and exploitable misconfigurations
- Generated structured vulnerability reports with risk ratings and prioritized remediation guidance

EDUCATION AND CERTIFICATIONS

Columbia Southern University – Online

B.S. Information Systems and Cybersecurity | Expected 2027 | GPA: 4.0 | Minor: Security and Network

Relevant Coursework: Linux Administration, SQL Database Management, Threat Modeling, Risk Management

Training and Boot Camps

- U.S. Cyber Challenge (USCC) Boot Camp – 2026 Eastern Region | Nominated and directly admitted | June 2026

Certifications

- Google Cybersecurity Professional Certificate
- ISC2 Certified in Cybersecurity (In Progress)
- Ethical Hacking – Cisco Networking Academy / CyberPatriot (Completed Apr 2026)

ACHIEVEMENTS AND RECOGNITION

- Nominated and directly admitted to U.S. Cyber Challenge (USCC) 2026 Eastern Region Boot Camp
- NSLS Member (2025) | President's List (2025) | Efficiency Award – Waymo
- John Istre Safety Award (2x) | Safe Driving Recognition – Pilot Flying J
- Graduate Recognition Award – Gary Job Corps | Omega Nu Lambda Honor Society

LICENSES AND ADDITIONAL QUALIFICATIONS

- CDL Class A | Tanker and HAZMAT Endorsements
- Security clearance eligible | Mission-critical operations experience
- Strong documentation and communication skills | Skilled trainer and mentor
